1Instructions to the Competitor	9

Introduction

Health Planner is a startup company that aims to help users live a healthy life by providing fitness-based services and customized information for each user.

Health Planner seeks to record and collect the user's daily workout and implement a service that allows users to check the amount of exercise and calorie consumption throughout an application.

Your job is to implement the provided prototype into an actual app and develop its features.

Description of project and tasks

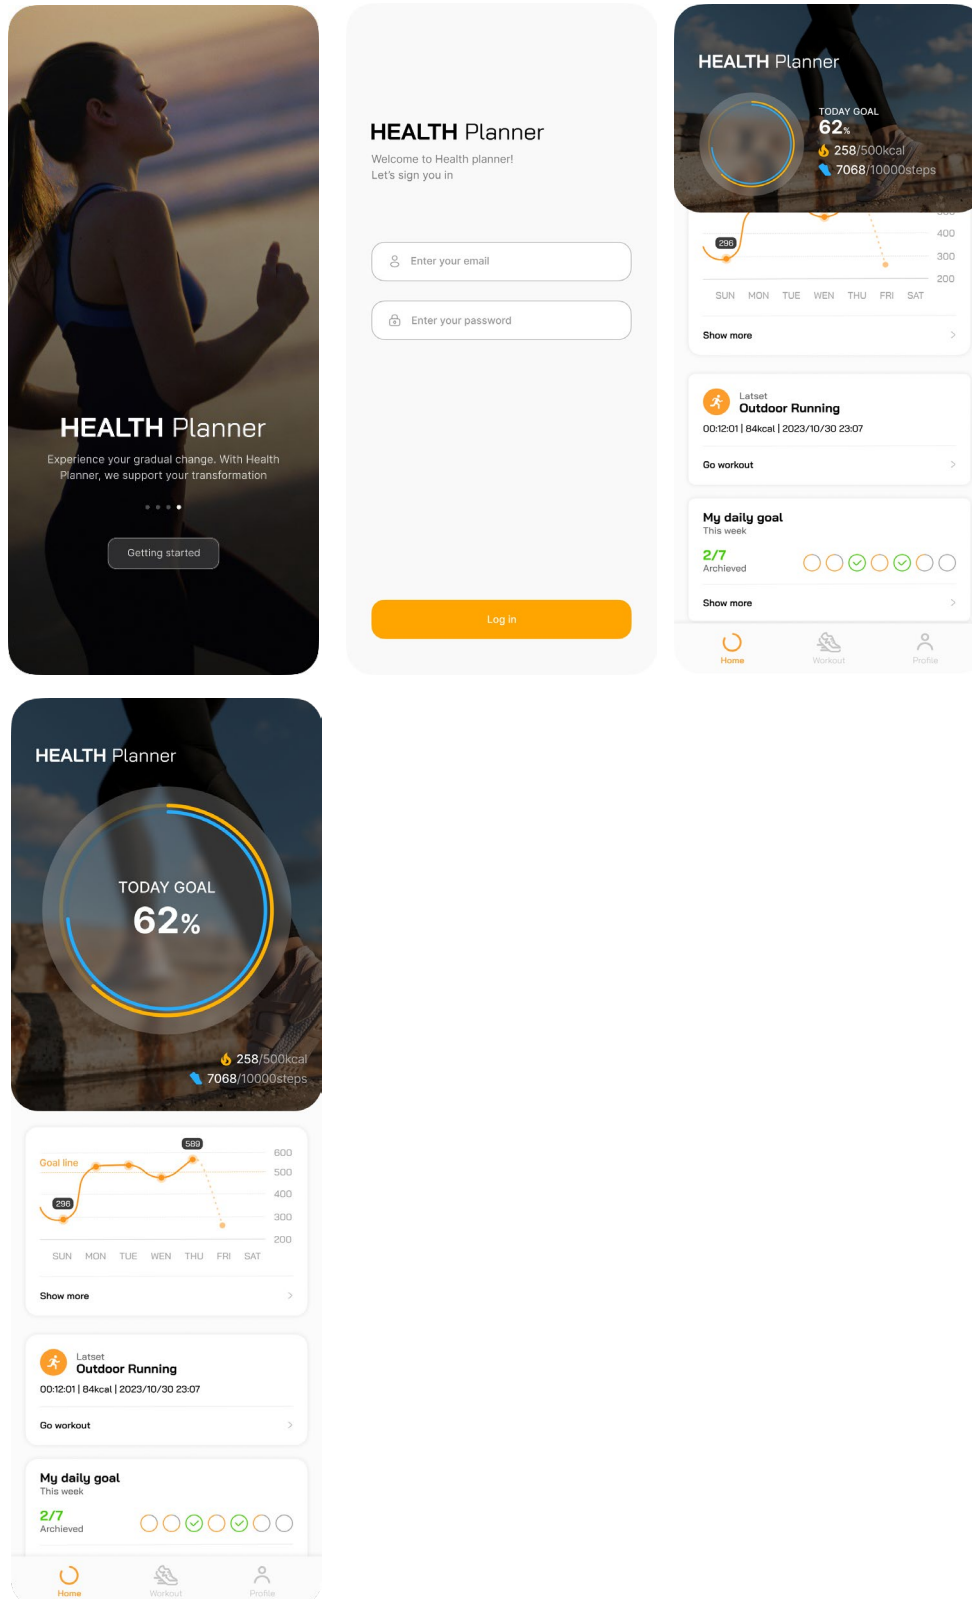

Developers must develop the program interface and aesthetic elements consistent with the given prototype. The development work is divided into two parts.

The API authentication method must be used by converting the Token value to JWT and including it in the request header. If it is difficult to use JWT, the Token value can be included in the request header.

The date/time format of the API is provided as Time Stampe (Unix epoch/seconds), and the elapsed time is provided as seconds.

.	Part	Name	Competitio n Time	Emulator
*	A.M.	Feature Development (Smartphone)	2.5h	Phone (6" / 856 × 1852) API 30
	P.M.	Feature Development (Smartphone)	2.5h	Phone (6" / 856 × 1852) API 30

<Wireframe>

1. General Requirements

1. Explanation

- 1.1 Create all features according to requirements.
- 1.2 The displayed page when running the app is the log-in page.
- 1.3 Create Welcome, log-in and homepage in AM Module
- 1.4 If you successfully log in, you should be taken to the home page including navigation.
- 1.5 All pages except the welcome and login pages have navigation at the bottom.
- 1.6 All messages used in the system (including error messages) must be fully understandable to the user and must be friendly enough to the user not to feel uncomfortable.
- 1.7 If permission is required on any page, a permission request is made and, in principle, all relevant permissions are granted during review. We do not forcibly modify permissions during review.
- 1.8 Workouts used in apps must be divided into types. Details for each workout are as follows.

TYPE	WORKOUT NAME	DETAILS
0	Outdoor Running	Icon: workout_icon_1.svg Display steps: O
1	Treadmill	Icon: workout_icon_2.svg Display steps: O
2	Swimming	Icon: workout_icon_3.svg Display steps: X
3	Outdoor Cycling	Icon: workout_icon_4.svg Display steps: X
4	Outdoor Walking	Icon: workout_icon_5.svg Display steps: O

2. General Requirements

NUMBER	SECTION / ELEMENT	LOCATION / REQUIREMENTS
1	Navigation: 1. "Home" Menu 2. "Workout" Menu 3. "Profile" Menu	Location: Bottom of the screen Requirements: 1. The menu corresponding to the current page is highlighted. 2. The navigation area remains fixed even when scrolling.

		3. "Workout" and "Profile" are blank pages for future development.
--	--	--

2. Welcome Page

1. Page Explanation:

- 1.1 Create "Welcome" page.
- 1.2 The "Welcome" page is displayed only once upon initial launch.
- 1.3 The "welcome" page has a background area and a content area.
- 1.4 Images are swiped when swiping the screen left or right.
- 1.5 When you press the "Getting started" button, you should be taken to the login screen.

2. Detailed Requirements

NUMBER	SECTION / ELEMENTS	LOCATION / REQUIREMENTS
1	Content area: 1. Health Planner logo 2. Main text content 3. Dot indicator 4. "Skip" text button 5. "Getting started" button	Location: middle bottom of the screen Requirements: 1. The dot indicator displays the same position as the image in the swipe area. 2. Give an underline option to the "Skip" text. 3. Clicking the "Skip" text button should take you to the "Login" page. 4. When the dot indicator is in the last position, the "Skip" text button is hidden and the "Getting Started" button is displayed. 5. Clicking the "Getting started" button should take you to the "Login" page.
2	Background area: 1. An image view that can swipe left and right 2. Black gradient overlay	Location: whole screen Requirements: 1. When you swipe the image left or right, the image changes along with the swipe animation.

3. Log-in page

1. Page explanation:

- 1.1 Create a "Login" page.
- 1.2 The "Login" page has a top area and a bottom area.
- 1.3 The User Identity and User Password input boxes undergo validation.
- 1.4 When you press the "Log in" button, you should be moved to the "Home" page after user authentication.
- 1.5 Create it using the login API.

2. Detailed requirements

NUMBER	SECTION / ELEMENT	LOCATION / REQUIERMENTS
1	Top area: 1. Health Planner Logo 2. Main text content	Location: top of the screen
2	Bottom area: 1. User Identity input box 2. User Password input box 3. "Log in" button	Location: bottom of the screen Requirements: 1. All input boxes undergo validation. 1.1 The User Identity text is in the form of an e-mail and must include a '@' symbol. 1.2 The User Password must include one of these ~, !, @, #, ^, &, * and no other special symbols are allowed. It must contain English letters (not case sensitive), numbers, and special symbols. 1. When entering the User Identity input box, the text field is an email input method. 2. When entering the User Password input box, the text field is the password input method. 3. User Password is not visible when entered. 4. When the "Enter" key on the keyboard is pressed, it must advance to the next input box or be submitted if no input box exists. 5. When you press the "Log in" button, user authentication is performed through the API. If

		authentication is successful, you will be moved to the "Home" page.
--	--	---

4. Homepage

1. Page explanation:

1.1 Create a "home" page.

1.2 The "Home" page consists of a top area, a graph of calories burned, a record of your last exercise, and a My Daily Goals area.

1.3 Create it using the user information API, user exercise amount API, and user exercise record API.

2. Detailed Requirements

NUMBER	SECTION / ELEMENTS	LOCATION / REQUIREMENTS
1	Top area: 1. Health Planner logo 2. kcal, steps circle graph and numerical text	Requirements: 1. Produced through API. 2. For each circle graph, the value is calculated using \$(goal line) as 100% and the numbers are displayed on the graph. 3. Numeric text is expressed as "\$ (value)/\$(goal line)\$(type name)" respectively. 4. The top area should be animated as the screen scrolls. (The animation effect can be set arbitrarily by the player, but the UI must be the same as the prototype for Min Position and Max Position.)
2	Calorie consumption graph: 1. Highs and lows text 2. Row line (including goal line) 3. Row items (5 elements) 4. Column items (7 elements) 5. Line graph by day of the week 6. "Show more" selection area	Requirements: 1. The graph shows calorie data for each day of the week. 2. The starting value of the row area of the graph is set to 0.4 times the target value, and the last value is set to 1.2 times the target value. (e.g. target:500, start value: 200, end value: 600) 3. The row line is variable depending on the data and displays 5 rows including the start and end values.

		- A rounded square box and \$(value) text are displayed at the top of the highest and lowest values of the day data. - The goal line is emphasized. - When you select "Show more," the message "This feature is in preparation" appears. - Created through API.
3	Last exercise record: - Icon, "Latest", "\${work out name}" elements - Exercise time, calories, date text "Go workout" selection area	Requirements: - There is an icon that matches the work out type. - Convert the exercise time to the specified format and display it. (Example: 1801 > 00:30:01) - Convert the exercise start date and time into a designated format and display it. (Example: 1699975156 > 2023-11-15 15:19) - Select "Go workout" to go to the "Workout" page. - Created through API.
4	My daily goal: "My daily goal", "This week" text elements "\${archived count}/7", "Archived" text element - Weekly goal achievement circle graph items (7 elements) "Show more" selection area	Requirements: - Created through API. - If \${today kcal} and \${today steps} exceed the goal line, they are displayed as Archived. - If archived, a green graph and a checkbox are displayed in the center. - If it is not archived, the momentum value for that day is shown in a graph. (kcal 50% + steps 50% ratio) - When you select "Show more," the message "This feature is in preparation" appears.

Instructions to the Competitor

- Create a project by following the package (organization) name. (Rule: worldskills.mad.krXX.am)
- Save the project in the XX_Module_KR_AM folder.
- Create the XX_Module_KR_AM.apk file and place it in the XX_Module_KR_AM folder.

4. Push the XX_Module_KR_AM folder to Git's XX_Module_KR_AM repository.
5. (XX is player number)
6. * Folder and file names are case sensitive.
