Introduction

Health Planner is a startup company that aims to help users live a healthy life by providing fitness-based services and customized information for each user.

Health Planner records and collects the user's daily workout and seeks to implement a service (that allows users) to check the amount of exercise and calorie consumption through an application.

Your job is to implement additional screens and features using the provided prototype to update your distributed app.

Description of project and tasks

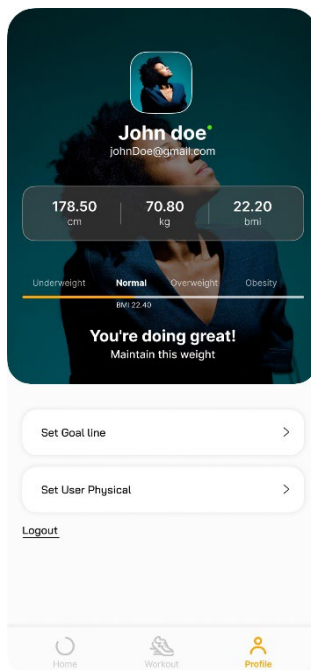

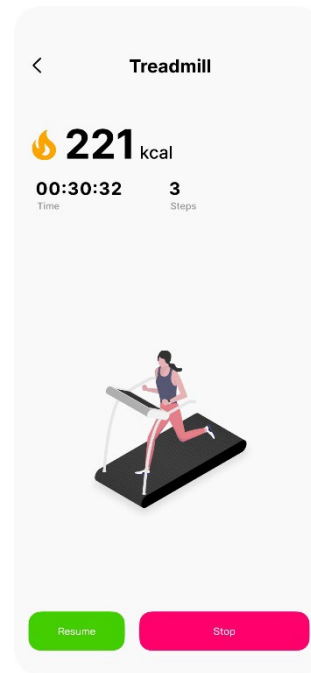

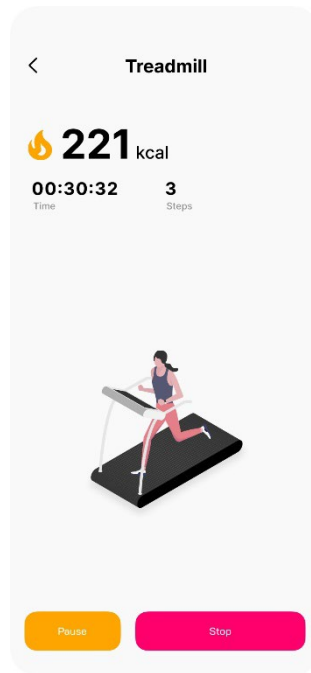

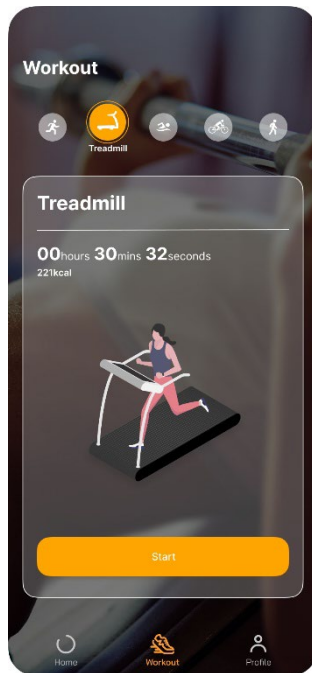

Developers must develop the program interface and aesthetic elements consistent with the given prototype. The development work is divided into two parts.

The API authentication method must be used by converting the Token value to JWT and including it in the request header. If it is difficult to use JWT, the Token value can be included in the request header.

API date/time format is provided as Time Stampe (Unix epoch/seconds), and the elapsed time is provided as seconds.

.	Part	Title	Competiton Time	Emulator
	A.M.	Function development (smart phone)	2.5h	Phone (6" / 856 × 1852) API 30
*	P.M.	Function development (smart phone)	2.5h	Phone (6" / 856 × 1852) API 30

1. General Requirements

1. Description

- 1.1 All functions are manufactured according to requirements.
- 1.2 When running the app, the displayed page is the login page.
- 1.3 In module PM, create workout home, workout, and profile page.
- 1.4 All pages except the welcome, login, and workout pages have navigation at the bottom.
- 1.5 All messages used in the system (including error messages) must be fully understandable to the user and must be friendly so that users don't feel uncomfortable.
- 1.6 If authority is required on every page, progress a authority request and all relevant authorities are allowed based on principle. We do not forcibly modify permissions during review.
- 1.7 Workouts used in apps must be divided into types. Details for each workout are as follows.

TYPE	WORKOUT NAME	DETAILS
0	Outdoor Running	Image: Workout_1.png Icon: workout_icon_1.svg Calorie consumption: 0.09kcal per second Step counts: 1 step per 1 second
1	Treadmill	Image:: Workout_2.png Icon: workout_icon_2.svg Calorie consumption: 0.08kcal per second Step counts: 1 step per 2 seconds
2	Swimming	Image:: Workout_3.png Icon: workout_icon_3.svg Calorie consumption: 0.2kcal per second Step counts: None
3	Outdoor Cycling	Image:: Workout_4.png Icon: workout_icon_4.svg Calorie consumption: 0.1kcal per second Step counts: None
4	Outdoor Walking	Image:: Workout_5.png Icon: workout_icon_5.svg Calorie consumption: 0.04kcal per second Step counts: 1 step per 3 seconds

2. General Requirements

NO.	SECTIONS / ELEMENTS	LOCATION / REQUIREMENTS
1	Navigation: 1. "Home" Menu 2. "Workout" Menu 3. "Profile" Menu	location: bottom of the screen Requirements: 1. The menu corresponding to the current page is highlighted. 2. The navigation area remains fixed even when scrolled.

2. Workout Homepage

1. Page Description :

- 1.1 Create a "Workout Home" page.
- 1.2 The "Workout Home" page has a top area, content area, and background area.
- 1.3 When you swipe the screen left or right, the screen changes depending on the type of workout.
- 1.4 When you click the "Start" button, it is moved to "Workout" page.
- 1.5 It is produced applying the exercise history API.

2. Detailed Requirements

NO.	SECTION / ELEMENT	LOCATION / REQUIREMENTS
1	Top area: 1. "Workout" title 2. Workout tab items (5 elements)	Location: Bottom center of screen Requirements: 1. The Workout tab items display an icon appropriate for the Workout type. 2. The highlight effect and \${workout name} text are applied to the selected tab.
2	Content Area: 1. "\${workout name}" title 2. Exercise time Text 3. Kcal consumption text	Location: Bottom of screen Requirements:

	4. Image suitable for workout type 5. "Start" button	1. When you swipe the area left or right, the element changes to match the Workout type along with the swipe animation. 2. "\${workout name}" text exists. 3. The most recent exercise information exists for each workout. - Workout time is displayed in the format "\${HH}hours \${mm}mins \${ss}seconds". - Kcal is displayed in the format "\${kcal}kcal". 4. There is an image that matches the Workout type. 5. When you press the "Start" button, you will be moved to the "Workout" page 3 seconds later with the "The exercise starts in 3 seconds." message.
3	Background area: 1. Image item 2. Black solid overlay	Location: Entire screen

3. Workout Page

1. Page Description:

- 1.1 Create a "Workout" page.
- 1.2 The "Workout" page has a top area and a bottom area.
- 1.3 Press the Back icon in System Navigation or the Back icon in the top area of the app to view the dialog.
- 1.4 Workout progress must be recorded even in offline mode and sent to the server for storage when the Internet is connecte.
- 1.5 It is produced using the exercise record submission API.

2. Detailed Requirements

N0.	SECTION / ELEMENT	LOCATION / REQUIREMENTS
1	Top area:	Location: Top of screen

	1. back icon 2. "\${workout}" title text 3. Icon and text "\${kcal} kcal" 4. "\${workout time} Time" text 5. "\${steps} Steps" text (only visible when measuring steps)	1. When clicking the back icon, a dialog containing a text "Until now, no records have been saved. Do you still want to go back?" , "Cancel", and "Go back" text buttons are displayed. 2. If you press the "Cancel" text button in the dialog, the dialog is hidden. 3. When you press the "Go back" text button on the dialog, the dialog is hidden and moves to the "Workout" page. 4. Workout measures kcal differently for each type. 5. Outdoor Running, Treadmill, and Outdoor Walking measure Steps values.
2	Bottom area: 1. Workout image 2. "Pause", "Start" toggle button 3. "Stop" button	Location: Bottom of screen Requirements:: 1. The image shows an image that matches the Workout type. 2. Pressing the "Pause" toggle button will pause recording. 3. Pressing the "Resume" toggle button resumes recording. 4. When you press the "Stop" button, A dialog is displayed containing text "Would you like to finish your workout?" , "No", and "Yes" text buttons. 5. Workouts must be submitted through the API, and if the device is in offline mode, the information must be stored on the server when connected to the Internet even if the app is closed and relaunched. 6. When Workout ends, in both offline and online situations, the "Last Workout Record" area on the "Home" page should be updated based on the information currently held on the device.

4. Profile Page

1. Page Description:

- 1.1 Create a "Profile" page.
- 1.2 The "Profile" page has a top area and a bottom area.
- 1.3 It is produced using the user information API, Goal line setting API, and Physical setting API.

2. Detailed Requirements

N0.	SECTION / ELEMENT	LOCATION / REQUIREMENTS
1	Top area: 1. Profile image 2. "\${user name}" text 3. "\${user email}" text 4. Background overlay image 5. Physical information items (3 elements) 6. Obesity rate graph items (3 elements)	Requirements: 1. Produced through API. 2. Profile and background overlay images exist by applying \${profile image url}. 3. The user name and user email text are present. 4. Physical information items include height, weight, and obesity rate. $\text{BMI} = \frac{\text{Weight (in kilograms)}}{\text{Height}^2 \text{ (in meters)}}$ 5. The graph showing obesity rates exists. 6. The current obesity rate status is showed highlighted. 7. The title that changes depending on the obesity rate exists. A. Underweight(~18.4): You are almost there! B. Normal(18.5~22.9): You're doing great! C. Overweight(23~24.9): You are almost there! D. Obesity(25~): Pay more attention to it 8. The body that changes depending on the obesity rate exists. A. Underweight(~18.4): Let's try a little harder B. Normal(18.5~22.9): Maintain this weight C. Overweight(23~24.9): Let's try a little harder D. Obesity(25~): Health Planner will help you!
2	Bottom area:	Requirements:

	1. "Set Goal line" button 2. "Set User Physical" button 3. "Log out" text button	1. When you press the "Set Goal line" button, a Bottom Sheet produced in consideration of convenience and aesthetics will be displayed. • There is a text field where you can enter Kcal. (Only numbers and "." can be entered) • There is a text field where you can enter steps. (Only numbers can be entered) • There is a "Submit" button item. • When you press the "Submit" button, kcal and steps are submitted. 2. When you press the "Set User Physical" button, a Bottom Sheet produced in consideration of convenience and aesthetics is displayed. • There is a text field where you can enter the key. (Only numbers and "." can be entered) • There is a text field where you can enter the weight. (Only numbers and "." can be entered) • There is a "Submit" button item. • Click the "Submit" button to submit the height and weight. 3. If the update is successful through the Bottom Sheet, the updated information should be reflected in the app in real time.

Instructions to the Competitor

1. Create a project by following the package(organization) name. (Rule: worldskills.mad.krXX.pm)
2. Save the project in the XX_Module_KR_PM folder.
3. Create the XX_Module_KR_PM.apk file and place it in the XX_Module_KR_AM folder.
4. Push the XX_Module_KR_PM folder to XX_Module_KR_PM repository of Git's.

(XX is competitor number)

* Folder and file names are Case Sensitive.
