

使用 ViewPager 顯示 Fragment

1. 加入 ViewPager

```
<androidx.viewpager2.widget.ViewPager2
    android:id="@+id/viewPager2"
    android:layout_width="match_parent"
    android:layout_height="0dp" />
```

2. 建立 Adapter

```
class MyPagerAdapter(fragmentActivity: FragmentActivity) :
    FragmentStateAdapter(fragmentActivity) {

    private val fragmentList = listOf(FirstFragment(),
    SecondFragment())

    override fun getItemCount(): Int {
        return fragmentList.size
    }

    override fun createFragment(position: Int): Fragment {
        return fragmentList[position]
    }
}
```

3.在 Activity 中為 ViewPager 加入 Adapter

```
viewPager2.adapter = MyPagerAdapter(this)
```

4 為 tabLayout 和 ViewPager 綁定

```
private val tabTitleList: List<String> = listOf("First  
Title", "Second Title")  
  
viewPager2.adapter = MyPagerAdapter(this)  
TabLayoutMediator(tabLayout, viewPager2) { tab, position ->  
    tab.text = tabTitleList[position]  
}.attach()
```

5.如果用代碼方式控制 ViewPager 顯示某一個 fragment

```
// 顯示 fragmentList 中的第一個 fragment  
viewPager2.setCurrentItem(0, true)
```
