

建立 Navigation Drawer

1.把 Activity 佈局文件修改為使用DrawerLayout和加入 NavigationView

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.drawerlayout.widget.DrawerLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:id="@+id/drawerLayout"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".NavigationDrawerActivity">

    <com.google.android.material.navigation.NavigationView
        android:layout_width="wrap_content"
        android:layout_height="match_parent"
        android:layout_gravity="start"
        android:fitsSystemWindows="true"
        app:headerLayout="@layout/nav_header"
        app:menu="@menu/nav_drawer_menu">

    </com.google.android.material.navigation.NavigationView>

</androidx.drawerlayout.widget.DrawerLayout>
```

2. 在 res->layout->new Layout Resource File 新建 `nav_header` 佈局文件

3. 在 res->menu -> Menu Resource File 新建 `nav_drawer_menu` 佈局文件

4. 在 Activity 加入

```
class NavigationDrawerActivity : AppCompatActivity() {

    private lateinit var toggle: ActionBarDrawerToggle
    private lateinit var drawerLayout: DrawerLayout

    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_navigation_drawer)

        drawerLayout = findViewById(R.id.drawerLayout)
```

```

        toggle = ActionBarDrawerToggle(this, drawerLayout, R.string.open,
R.string.close)
        drawerLayout.addDrawerListener(toggle)
        toggle.syncState()

        supportActionBar?.setDisplayHomeAsUpEnabled(true)
    }

    override fun onOptionsItemSelected(item: MenuItem): Boolean {
        if(toggle.onOptionsItemSelected(item)) {
            return true
        }
        return super.onOptionsItemSelected(item)
    }
}

```

5. Navigation Drawer 中的點擊事件

```

val navigationView: NavigationView =
findViewById(R.id.navigationView)

navigationView.setNavigationItemSelectedListener {
    when(it.itemId) {
        R.id.miItem1 -> Toast.makeText(this, "item1 clicked",
Toast.LENGTH_SHORT).show()
        R.id.miItem2 -> Toast.makeText(this, "item2 clicked",
Toast.LENGTH_SHORT).show()
    }
    true
}

```
