

時間選擇器用法

1. 點擊打用 TimePickerDialog

```
class MainActivity : AppCompatActivity() {

    private lateinit var timePickerDialog: TimePickerDialog
    private lateinit var editText: EditText

    override fun onCreate(savedInstanceState: Bundle?) {

        timerPickerDialog = TimePickerDialog(
            this,
            { _, hour, minute ->
                editText.setText(String.format("%02d:%02d", hour,
                    minute))
            },
            12,    // 預設小時
            0,     // 預設分鐘
            false,
        )

        editText.setOnClickListener {
            timerPickerDialog.show()
        }

    }

}
```
