

Class 7

動態增加元素到 LinearLayout

```
linearLayout = findViewById(R.id.linearLayout)

val textView = TextView(this)
textView.text = "content"

linearLayout.addView(textView)
```

刪除 LinearLayout 所有元素

```
linearLayout.removeAllViews()
```

使用自定義模版加到 LinearLayout

```
// 取出自定義模版
val layout = layoutInflater.inflate(R.layout.layout_name,
null)

// 更換模版中內容
layout.findViewById<TextView>(R.id.textView).text = "content"

linearLayout.addView(layout)
```

Kotlin Class 定義

```
class House(var color: String,  
            var numberOfWindows: Int,  
            var isForSale: Boolean) {  
  
    fun updateColor(newColor: String) {...}  
    fun putOnSale() {...}  
}
```

創建實例

```
val myHouse = House("white", 2, false)  
val myHouse2 = House("red", 3, true)  
  
myHouse.color  
myHouse.putOnSale()
```
