

Test Project

Module B - Design

Mobile Applications Development

Introduction

WSConecta is the platform that revolutionizes connections among WorldSkills participants, using a fun and playful approach. Designed to connect competitors, trainers, and experts intelligently and efficiently, WSConecta transforms the interaction process into an engaging, motivating, and personalized experience.

Through the WSConecta app, students have access to high-quality content about the competition, allowing them to learn about it in a dynamic and interactive way. Dialogues, connections, interactions, and even curiosity about potential competitors are part of the competition, fostering greater immersion and engagement among the participants. Participants can also interact with their instructors and peers, as well as view rules, past skills, dates, schedules, and their progress in real time, through an intuitive social networking system. WSConecta: competing can be fun, too.

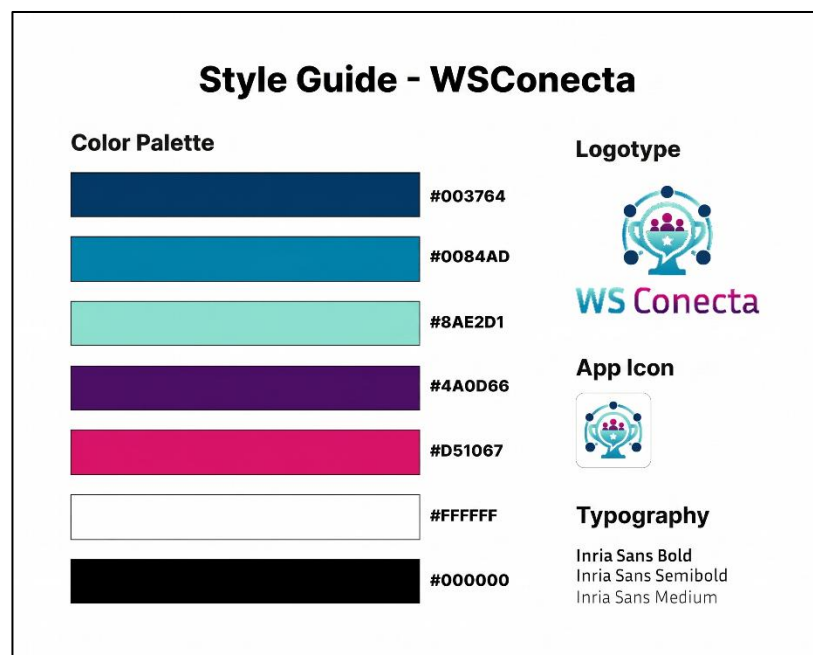

The Product Owner provided you with product wireframes for the tablet version. Since the wireframe is just a conceptual sketch, your task as the mobile app's visual designer is to analyze and redesign that sketch to provide the development engineer with a high-fidelity standard prototype.

Project Description and Tasks

The developer is free to work on the exact aesthetics of the program's interface and the positioning of the elements. The work may be inconsistent with the provided wireframes, but the developer needs to properly consider usability.

	Period	Name	Competition time	Device
✓	P.M.	Design (tablet)	2.5h	Figma: Android Medium

- All images/logos required for the development of this module are included in the delivered "media-files" folder;
- The use of colors from the available color palette is mandatory; no colors outside the palette may be used.

General requests

1. You must create the app prototype according to the session instructions and following best practices.
2. The screens presented in this document are low-fidelity and serve strictly to illustrate the information architecture, the layout of elements, and the mandatory components that each screen must contain.
3. The wireframes do not represent the final interface, colors, spacing, or the intended visual design. The design team has full autonomy and should apply UI (User Interface) and UX (User Experience) best practices, using their creativity to propose visual solutions that are modern, fluid, and aesthetically superior to the presented sketch.
4. When necessary, screens may include a vertical scroll bar. No screen may have a horizontal scroll bar; therefore, all items must be arranged to meet this requirement.
5. All text enclosed in quotation marks must be inserted exactly as is into the prototype;
6. It is not necessary to use all the data from the media files;
7. You can change the icons in the wireframes.
8. The prototype must be developed and configured exclusively for display in landscape format (horizontal orientation);
9. You must add at least one new screen to enhance the app's theme. The screen's content is up to you; you can create a readme.txt file in the project root indicating how to access this extra screen;

Page requests

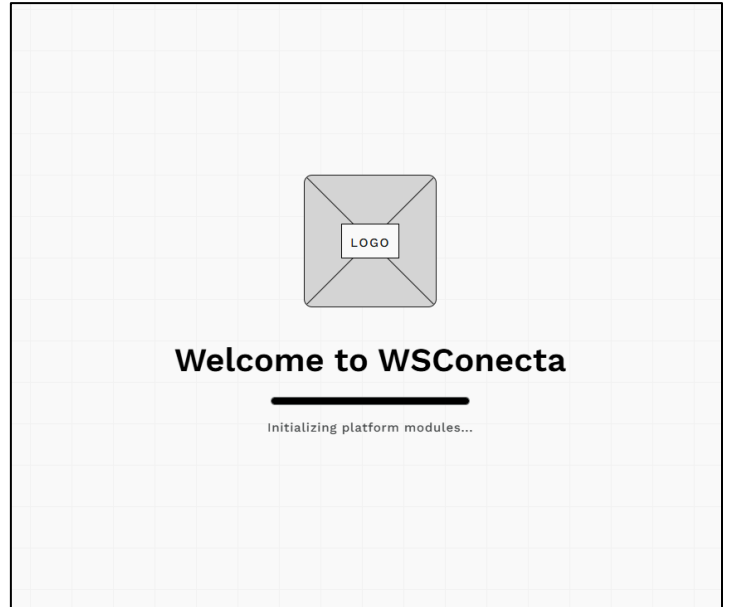

1. Splash Screen

1.1 Visual components:

1. App logo;
2. Text: “Welcome to WSConecta”;
3. Loading bar;
4. Text: “Initializing platform modules...”

1.2 Design Requirements

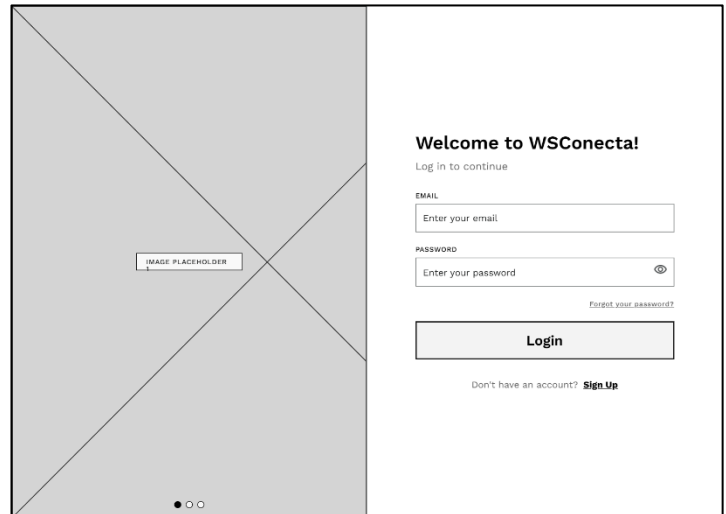

1. The logo must be animated, entering from left to right and stopping in the center of the splash screen;
2. The name WSConecta should appear (moving from top to bottom) and stop exactly below the logo;
3. The loading bar and the text “Initializing platform modules...” should appear on the screen after the name WSConecta settles into position;
4. After this, the loading bar should simulate a 5-second load;
5. After filling it out, the user should be redirected to the “Login” screen;
6. The closing of the splash screen **must** feature a transition in which all elements move from the center to the right.

2. Login

2.1. Visual components:

1. Carousel with 3 images provided in Media Files, positioned on the left side and occupying half the screen;
2. Visual indicators showing which image is being displayed in the carousel;
3. Title text: "Welcome to WSConecta!";
4. Text for "Log in to continue".
5. Text for "Email" descriptive label;
6. Input with placeholder "Enter your email";
7. Text for "Password" descriptive label;
8. Input with placeholder "Enter your password";
9. Eye icon inside the password input;
10. Text for "Forgot your password?"
11. Button with the text "Login";
12. Text for "Don't have an account? Sign up," with the word "Sign up" as the only clickable text (link to the registration page).

2.2 Design requirements:

1. The screen must feature an entrance animation for the elements, with the image moving from left to right until it occupies the left corner of the screen, and the other elements moving from right to left in a sequential manner, i.e., an element only appears after the previous one is already positioned on the screen; the "Pose-to-Pose" animation principle should be used for this.
2. The image change in the image carousel should occur:
 - Automatically every 2 seconds;
 - **Horizontal swipe gesture** (sliding your finger left or right on the screen): **Advance (next image)**: Swipe your finger from right to left. **Back (previous image)**: Swipe your finger from left to right;
 - Clicking on the visual indicator points.
3. The indicating visual point must correspond exactly to the image being displayed;
4. Upon reaching the last image, regardless of the trigger method, the carousel must return to the first image;
5. All input fields must demonstrate the specific data entry according to their standard format; for the password field, masking dots must be displayed initially.
6. When you click and hold the eye icon inside the password input field, the content—initially masked by dots—should become visible; upon releasing the icon, the password should revert to being masked by dots.
7. Upon clicking the "Login" button, the user must receive a "snackbar" message stating "Your login was successful" and subsequently be redirected to the Home screen.
8. Upon clicking the "Sign Up" link, the user should be redirected to the "Sign Up" screen.

3. Sign Up

3.1. Visual components:

1. Image provided in Media Files, positioned on the left side and occupying half the screen;
2. All elements (except the image, which already occupies the left side of the screen) must be centered and occupy the right half of the screen.
3. Text for the “Sign Up” title;
4. Avatar image (competitor08) available in “Media Files”
5. Text for descriptive label “Name”;
6. Input with placeholder “Enter your name”;
7. Text for descriptive label “Username”;
8. Input with placeholder “Enter your username”;
9. Text for "Email" descriptive label;
10. Input with placeholder “Enter your email”;
11. Text for “Password” descriptive label;
12. Input with placeholder “Enter your password”;
13. Text for "Confirm password" descriptive label;
14. Input with placeholder “Confirm your password”;
15. Checkbox with the descriptive text "I accept the terms of use and privacy policy".
16. Button with the text “Create Account”;
17. Text “Already have an account? Log in”.

Create Account

Already have an account? [Log in](#)

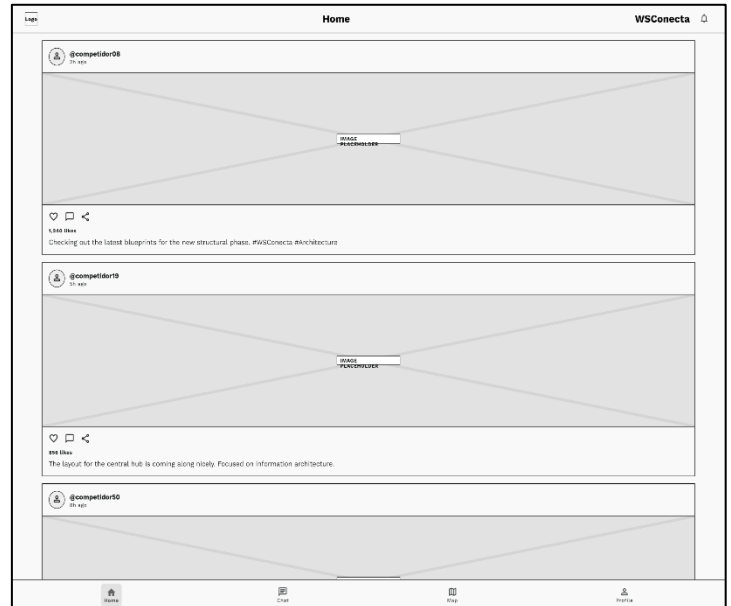

3.2 Design requirements:

1. The screen must feature an entrance animation for the elements, with the image moving from left to right until it occupies the left corner of the screen, and the other elements moving from right to left in a sequential manner, i.e., an element only appears after the previous one is already positioned on the screen; the "Pose-to-Pose" animation principle should be used for this.
2. All inputs must contain the simulation of the specific data entry according to its standard format, in the case of the password, dotted characters must be displayed;
3. The checkbox must include the checked and unchecked states.
4. Upon clicking the “Create Account” button, the user should be directed to the “Login” screen;
5. Upon clicking the “Log in” text/link, the user should be directed to the “Log in” screen.

4. Home screen

4.1 Visual components:

1. WSConecta logo, at the top left of the screen;
2. Centered title set to “Home”;
3. “WSConecta” title at the top right of the screen;
4. The posts on the Home screen must be displayed centered;
5. The display of the posts must include:
 - User photo corresponding to their Skill (provided in the media files);
 - Username (example: competitor08, @competitor50, @competitor19, @competitor32 and @competitor09);
 - A timer showing the time elapsed since publication, displayed below the name;
 - The image for the post corresponding to their Skill (provided in the media files);
 - Like icon;
 - Comment icon;
 - Share icon;
 - Text indicating the number of likes;
6. The screen must display at least 5 (five) different posts;
7. The bottom navigation must be fixed and feature 4 icons with the labels: “Home”, “Chat”, “Map”, and “Profile”.
8. Furthermore, on the bottom navigation bar, the icon corresponding to the current (active) screen will need to be highlighted;

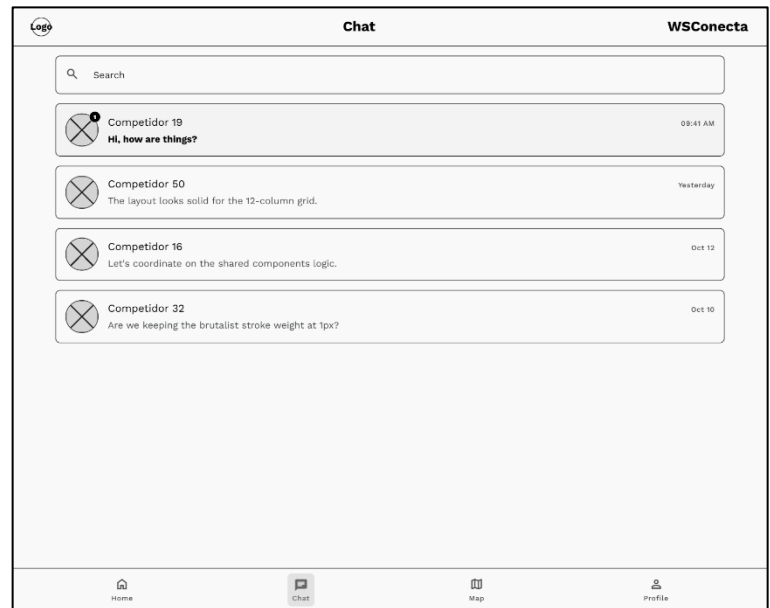

4.2. Design requirements:

1. The top and bottom bars must be static, that is, they must remain fixed during the vertical movement of the content;
2. The developer must ensure that the root element or main container has vertical scrolling while maintaining layout integrity.
3. Upon double-tapping any post, the heart icon (like) should display an animation in which its background progressively fills with red while it performs a zoom-in and zoom-out effect, as shown in the example video at media-files\Animations\;
4. After liking the post, the number indicating the likes will increase;
5. These visual changes to the "like" icon and the like count should only occur on the post that received the double-tap;
5. Each item in the bottom navigation must be linked to its corresponding page.

5. Chat

5.1. Visual components:

1. WSConecta logo, at the top left of the screen;
2. Centered title set to "Chat";
3. WSConecta title at the top right of the screen;
4. Search bar with a magnifying glass icon and the text "Search";
5. List of chat conversation cards, containing 4 in total.;
6. Each conversation must contain:
 - User photo corresponding to their Skill (provided in the media files);
 - Competitor name according to wireframe;
 - Preview of the last message;
 - Timestamp of the last received message;
7. On the first conversation card (Competitor 19), there must be a numerical visual badge over the contact's avatar indicating that there is 1 unread message.;
8. The unread message preview should appear in bold, standing out from the previews of other conversations;
9. The bottom navigation must be fixed and feature 4 icons with the labels: "Home", "Chat", "Map", and "Profile".
10. Furthermore, on the bottom navigation bar, the icon corresponding to the current (active) screen will need to be highlighted;

5.2 Design requirements:

1. The user must be redirected to the internal chat screen (Active Chat Screen) upon clicking the first item in the conversation list (Competitor 19);
2. The numerical visual badge on the contact's avatar indicating the number of unread messages must feature an animation that cycles between blue and red (example available in media-files\Animations\);
3. After accessing the conversation (Active Chat Screen) from the first card and returning to the chat screen, the numeric badge over the contact's avatar indicating unread messages should no longer appear, and the message preview should no longer be in bold, appearing visually identical to the previews of other conversations;
4. Each item in the bottom navigation must be linked to its corresponding page.
5. When the user clicks and holds the first item in the conversation list (Competitor 19), a trash can icon should appear somewhere within the card; if the user clicks anywhere other than on this icon, it disappears and the screen reverts to its previous state, whereas clicking the trash can icon deletes the conversation from the list, taking immediate visual effect.
6. It should be possible to filter conversations by simulating data entry in the search field and subsequently clicking the magnifying glass icon.

6. Active Chat

6.1. Visual components:

1. This screen must be displayed in full screen, without showing the bottom navigation bar;

2. Profile photo (circular avatar) positioned at the top left of the screen;

3. Competitor's name at the top of the screen (Competitor 19);

4. WSConecta title at the top right of the screen;

5. Chat message history containing the flow of exchanged messages;

6. The message history must contain two structural formats:

- Received Messages / Typing Status (Left): aligned to the left margin, displaying the contact's profile photo (avatar) next to a speech bubble containing the message, or three dots when indicating typing status;

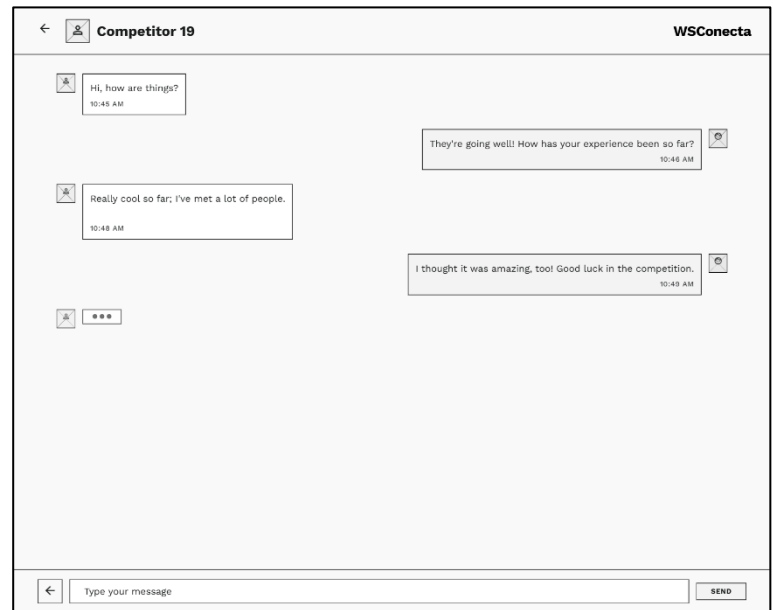

- Sent Messages: right-aligned, displaying the logged-in user's profile photo (avatar) next to a speech bubble containing the content or a visual indicator;

7. Back button with a left-arrow icon (←) at the bottom left of the screen, next to the text box;

8. Text input bar at the bottom of the screen with the placeholder set to “Type your message”;

9. Rectangular submit button on the right side of the footer containing the text “Send”;

10. All new messages must adopt the same standard, layout, and font;

6.2 Design requirements:

1. Upon opening the screen, only the unread message from user Competitor 19, “Hi, how are things?”, should be displayed;

2. The prototype must enable the user to simulate a real-time chat conversation between competitors, featuring messages (media files/data), animations, and transitions;

3. For the chat to function, there must be a simulation of data entry into the text box; upon clicking the "Send" button, the same content should appear on the screen above (the conversation);

4. The “Enter your message” text field must be cleared automatically and immediately after a message is successfully sent.;

5. After the first response from the logged-in competitor (Competitor 08) (“They're going well! How has your experience been so far?”), there should be a 5-second simulation of a typing state from Competitor 19. This typing state should include an animation of your choice;

6. After 5 seconds, the typing status should disappear from the screen and the reply message ("Really cool so far; I've met a lot of people.") should automatically appear in the chat;

7. Finally, to complete the real-time chat conversation simulation, data entry into the message field must be simulated with the message “I thought it was amazing, too! Good luck in the competition.”; upon clicking the “Send” button, the same content must appear in the display area above (the conversation);

8. Upon clicking the back button (←), the system must terminate the active chat session and redirect the user back to the conversation list screen (Chat).

9. Upon returning to the Chat screen, the first conversation in the list—with Competitor 19, which previously displayed a marker indicating one new unread message and a bolded message preview—should no longer show these highlights, instead adopting the exact same layout and design as the other conversations in the list.

7. Map

7.1. Visual components:

1. WSConecta logo, at the top left of the screen;
2. Centered title at the top defined as “WSConecta Maps”;
3. WSConecta title at the top right of the screen;
4. Screen split into two main panels arranged side-by-side (left panel: map; right panel: information);
5. The left panel must contain:
 - * Centered top heading with the text “Discover the last 5 host countries”;
 - * Image of an illustrative world map (media-files\Images) occupying the largest area of the panel on the left;
 - * 5 visual markers (location pins) distributed geographically across the world map (Russia, France, UAE – United Arab Emirates, Japan, and China);
6. The right panel should contain:
 - * Top informational text block with the title “About WorldSkills,” accompanied by a box containing the competition’s institutional description (media-files\Data);
 - * Centered instructional text set to “Click on a country to display information”;
 - * Button with the default text “Select a country”;
 - * Button with the text “Fun facts about the country”;
 - * Bottom section titled “Statistics” containing a list with three data items: “Participating Countries,” “Competitors,” and “Skills”;
7. The bottom navigation must be fixed and feature 4 icons with the labels: “Home”, “Chat”, “Map”, and “Profile”.
8. Furthermore, on the bottom navigation bar, the icon corresponding to the current (active) screen will need to be highlighted;

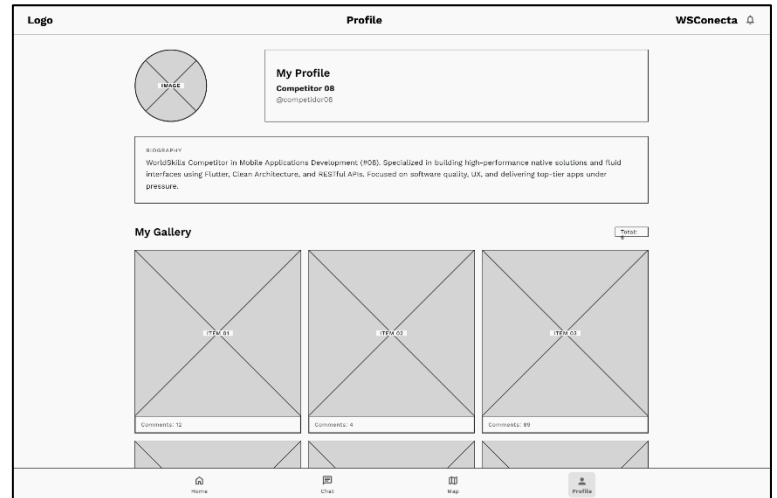

7.2 Design requirements:

1. The system must allow user interaction by clicking on any of the 5 location markers (pins) available on the world map;
2. When a marker on the map is selected, the system must dynamically update the right panel with specific information about the chosen host country (information contained in media-files\Data);
3. The selected host country (pin) must be visually distinguished from the others.
4. The "Statistics" section must load and display the numerical data (information contained in media-files\Data) corresponding to the totals for "Participating Countries," "Competitors," and "Skills" linked to the selected country;
5. Each item in the bottom navigation must be linked to its corresponding page.

8. Profile

8.1. Visual components:

1. WSConecta logo, at the top left of the screen;
2. Centered title at the top set as "Profile";
3. WSConecta title at the top right of the screen;
4. Photo of Competitor 08 (Profile photo available in media-files\Images);
5. Rectangular data box at the top of the profile, positioned on the right, containing:
 - Internal title "My Profile";
 - "Name" text corresponding to the user ("Competitor 08");
 - "User" text corresponding to the user's @ handle ("@competidor08");
6. A horizontal rectangular biography box positioned below the data block, containing the title "Biography" and the text with the biographical information, available in "media-files\Data";
7. Central section titled "My Gallery";
8. Image grid positioned below the gallery title, displaying 6 cards arranged in two rows and three columns;
9. The bottom navigation must be fixed and feature 4 icons with the labels: "Home", "Chat", "Map", and "Profile".
10. Furthermore, on the bottom navigation bar, the icon corresponding to the current (active) screen will need to be highlighted;

8.2. Design requirements:

1. The prototype must display the media published by the user (images located in media-files\Images) in an image grid, arranging the image blocks proportionally in columns of three elements such that vertical scrolling is required.
2. Vertical scrolling must occur exclusively within the area containing the photo gallery (My Gallery), while keeping the top header, the profile information block, and any other part of the screen fixed;
3. Each item in the bottom navigation must be linked to its corresponding page.

Delivery instructions

1. Create and export the project in Figma with the following name: **08_ModuleB2.fig**;
2. Save the file inside the folder named: **XX_Module_B_PM**;
3. The complete **XX_Module_B_PM** folder must be sent to the provided remote Git repository by the deadline;
4. Note: "XX" refers to your workstation code.
