

Module 3

Snooker Hall Management App “SnookerTrack”

Introduction

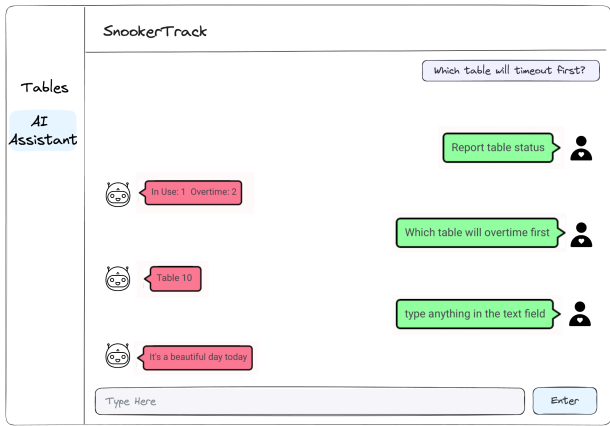

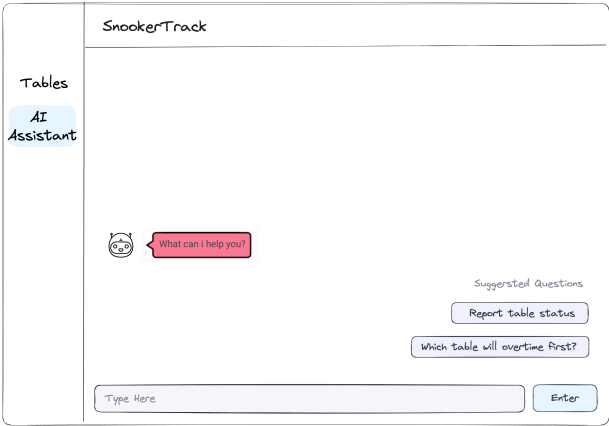

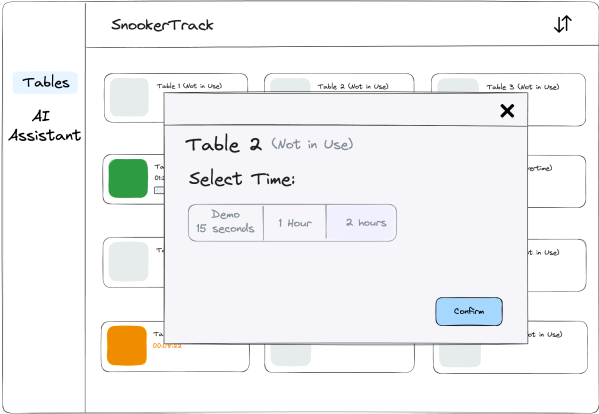

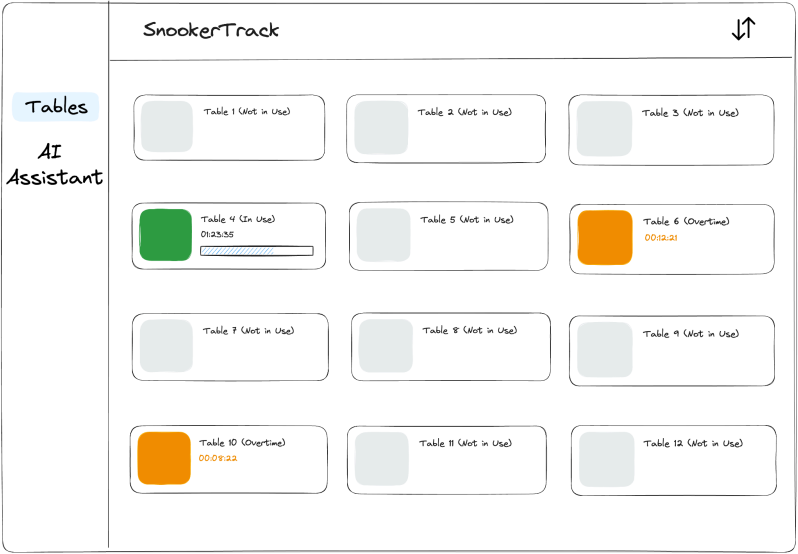

SnookerTrack is an app designed specifically for small snooker halls, to help them manage their business. The app provides real-time monitoring of table availability, and aims to provide a great experience for the user.

Description of project and tasks

- Emulator: Pixel C or iPad Pro (9.7-inch)
- You do not need to consider the aesthetics of the program interface but you need to properly consider the ease of use.
- The app may only be used in landscape mode

Module Time

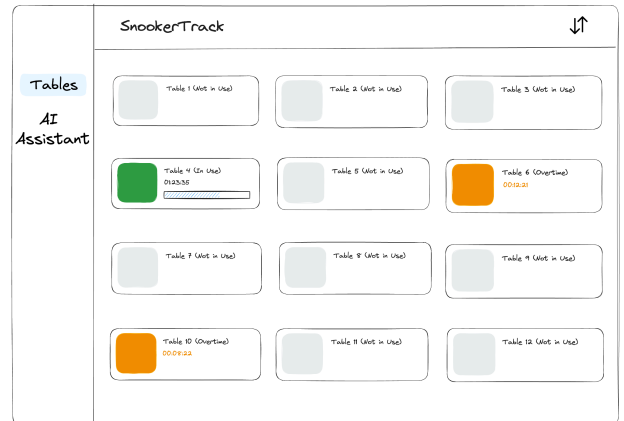

2.5 hours

Tables

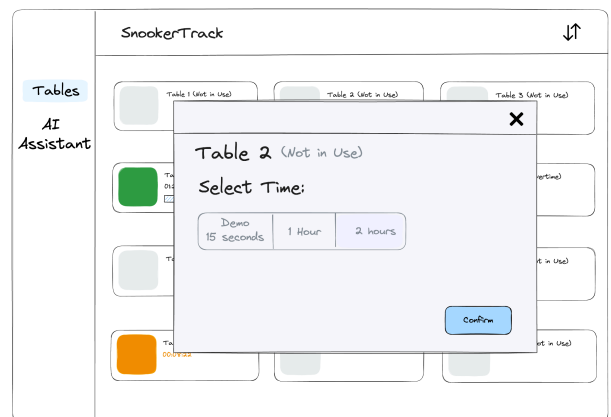

1.1 User Interface Requirements:

1. Display header text “SnookerTrack”
2. Display menu text “Tables”
3. Display menu text “AI Assistant”
4. Reorder Icon
5. Total 12 tables (Table 1 ~ Table 12)

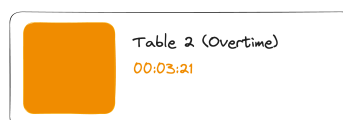

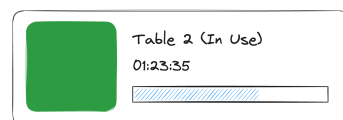

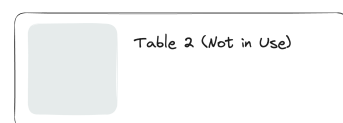

1.2 Functional Requirements:

1. Clicking on each table will pop up a functional window

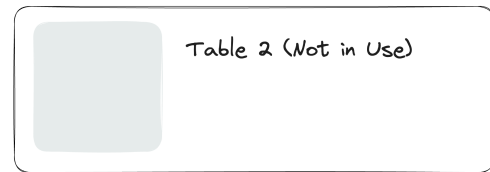

Each table has the following 3 different states

- No in Use
- In Use
- Overtime

User Interface Requirements:

1. Table Number
2. Label Color (#e9ecef)
3. Display Text "Not in use"

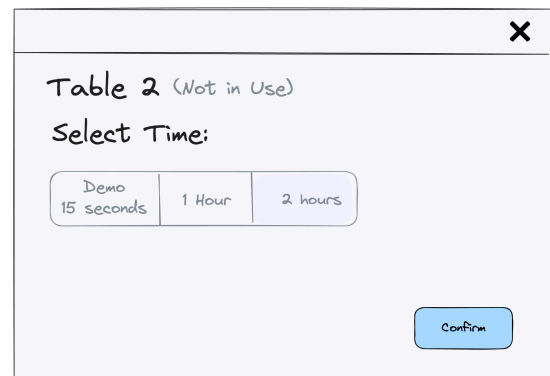

Functional Requirements:

1. Popup window appears when clicked

Pop up window user Interface Requirements:

1. Selected table's number
2. Display text "Not in Use"
3. Display text "Select Time:"
4. Selection for the table usage time:
 - 15 seconds
 - 1 hour
 - 2 hours
5. Confirm Button
6. Close Button

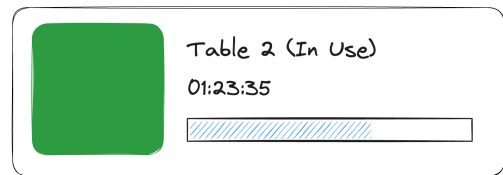

Pop up window functional Requirements:

1. After the user selects a usage time and clicks the "Confirm" button, change the table status from "Not in Use" to "In Use".
2. The table's total usage time and remaining time in the "In Use" state are set correctly based on the user's selection.
3. Clicking the "Close" button will close the popup window.

User Interface Requirements:

1. Table Number
2. Label Color (#2f9e44)
3. Display Text "In Use"
4. Remaining Time for the table
5. Progress Bar for the remaining time

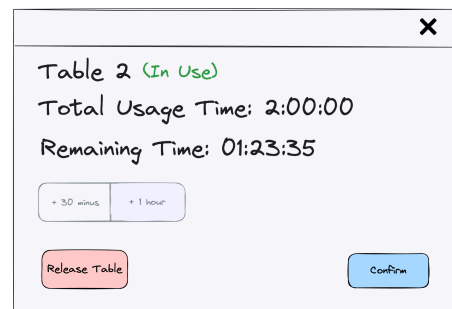

Functional Requirements:

1. Real-time update of the Remaining time (Decrease per second)
2. Real-time update of the progress bar based on total usage time and remaining time
3. Popup window appears when clicked

Popup window user Interface Requirements:

1. Selected table's Number
2. Display text "In use"
3. Correct display of the table's total usage time
4. Correct display of the table's remaining time
5. Selection for increasing the remaining time:
 - + 30 minus
 - + 1 hour
6. Release Table Button
7. Confirm
8. Close Button

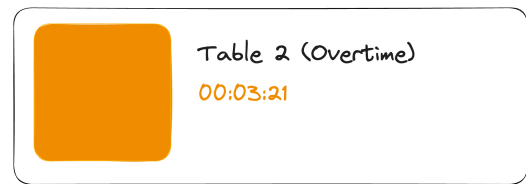

Popup window functional Requirements:

1. Real-time update of the Remaining time (Decrease per second)
2. The table's total usage time and remaining time increase accordingly based on the selection of the time.
3. Clicking the "Release Table" button changes the table status from "In Use" to "Not in Use".
4. Clicking the "Close" button will close the popup window.

User Interface Requirements:

1. Table Number
2. Label Color (#f08c00)
3. Display Text "Overtime"
4. Overtime duration for the table

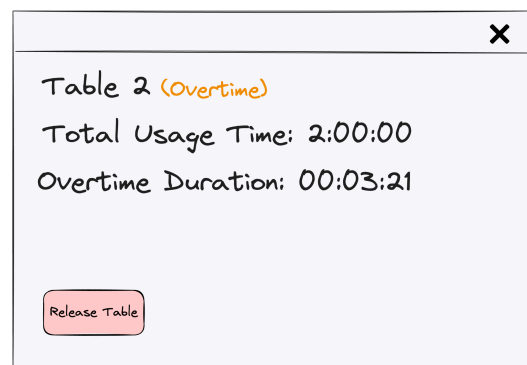

Functional Requirements:

1. Real-time update of the overtime duration (Increase per second)
2. Popup window appears when clicked

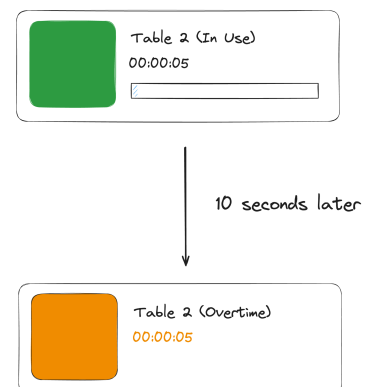

Popup window user Interface Requirements

1. Selected table's number
2. Display text "Overtime"
3. Correct display of the table's total usage time
4. Correct display of the table's overtime duration
5. Release Table Button
6. Close Button

Popup window functional Requirements:

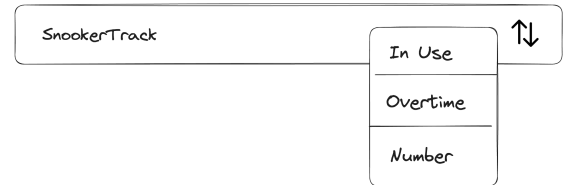

1. Real-time update of the remaining time (Increase per second)
2. Clicking the "Release Table" button changes the table status from "Overtime" to "Not in Use"
3. Clicking the close button closes the popup window.
4. All tables in the "In Use" state will automatically enter the "Overtime" state when their remaining time expires, and this change will be reflected in the interface.

Reorder Tables

User Interface Requirements:

1. After clicking the reorder icon, a popup menu will appear with the following options:
 - In use
 - Overtime
 - Number

Functional Requirements:

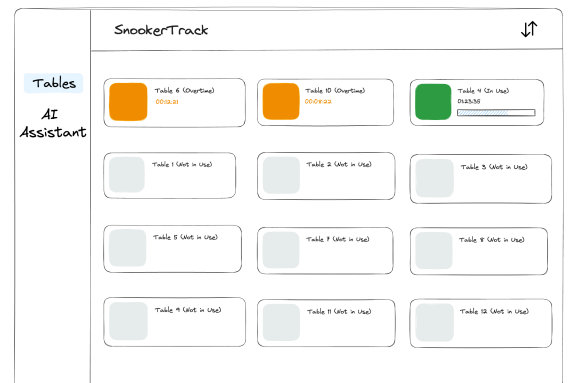

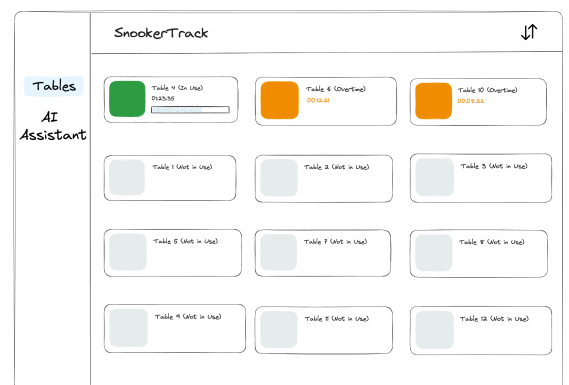

1. Clicking on the "In Use" option in the menu will reorder all tables based on the following table states:

In Use -> Overtime -> Not in Use

2. Clicking on the "Overtime" option in the menu will reorder all tables based on the following table states:

Overtime -> In Use -> Not in Use

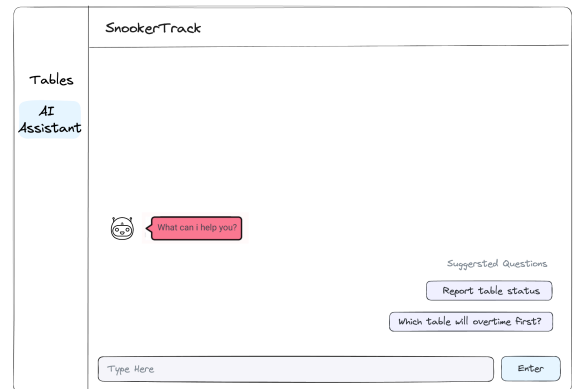

3. Clicking on the "Number" option in the menu will rearrange all tables based on their table numbers.

Page AI Assistant

User Interface Requirements:

1. Robot icon
2. Robot dialogue box with the text "What can I help you?"
3. Suggested questions text: "Report table status" and "Which table will timeout first?"
4. User icon and user dialogue box
5. Text input box and enter button

Functional Requirements:

1. When the user clicks on the suggested text "Report table status" or "Which table will overtime first?", it indicates that the user is asking the question to the robot. The user icon and the selected text dialogue box appear.
2. The robot responds to the correct answer to the question "Report table status" based on the current status of the tables.
3. The robot responds to the correct answer to the question "Which table will overtime first?" based on the current status of the tables.
4. If the user enters any content in the input box, the robot always responds with "It's a beautiful day today."
