

Introduction

The application is requested by Universitio company which provides tools and support for applying to universities around the world.

Students can connect to each other, find the university they want or apply to them through the application.

The product manager has provided you with product wireframes.

As a developer of mobile applications, your task is to develop corresponding apps based on the given wireframes according to specific development needs.

Description of project and tasks

The developer does not need to consider the aesthetics of the program interface and the position of the elements. The work can be inconsistent with the given wireframes, but the developer needs to properly consider the ease of use.

All text with quotation marks must be the **same as** the elements included.

Functionality (phone)

Duration: 2.5h

Emulator: Pixel 2 (API 31) or iPhone 8 Plus (iOS 16.4)

1- Page Welcome:

The first page is a welcome page providing sign in and creating account options.

Discover and Apply to your Ideal University, College, or
School in the UK, US, Canada, and Europe

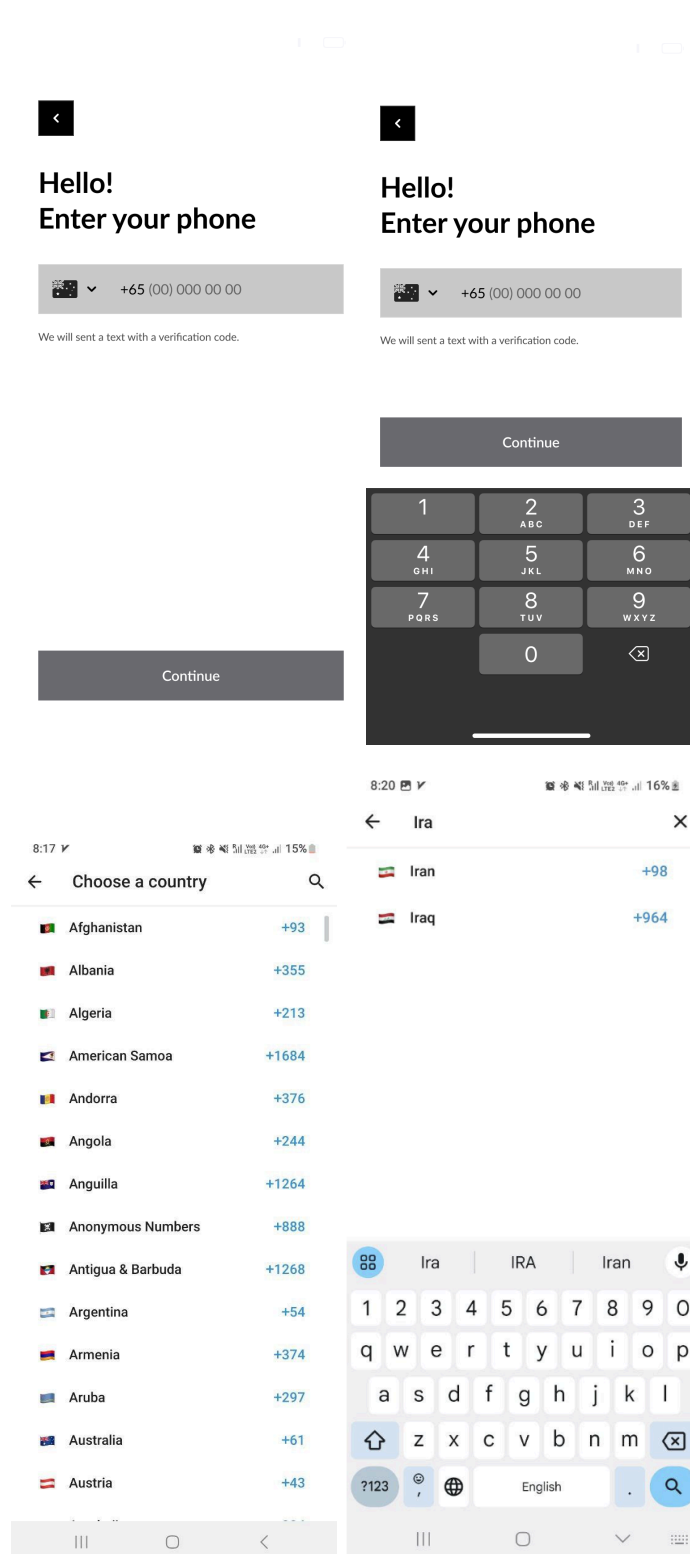

Create account

Sign in

Elements Included:

- Provide exact text
- The logo is provided as logo.jpeg in assets
- Create account will direct to the "Create account" page.
- User will see this page if the account is not created, after that user will directly login to the home page when opening the app

2) Create Account Page:

Elements Included:

- Entering the create account page, the user can insert his/her number.
- When tapping on the country flag, the country search page will open. The page includes a country flag icon and country name and the user can search the country based on (**country name** or **country code**) and see the result.
- Country data is available in **countries.json** in assets.
- When the user selects a country, the page will close and the selected country flag will appear in the create account form.
- The (**dial code**) will be a fixed value in the first part of the text input area and cannot be changed. But the user can insert the following phone number after that.
- Make sure that only the numbers are available in the keyboard input
- When user taps continue the account info page will open.

3) Account Info Page:

In this page users can fill in some data before the account is completed submitting.

1 2 / 0 3 / 1 9 Y Y

1 2 3 4 5 6 7 8 9 0

9:41

Your birthday
Your age will be public

1 2 / 0 3 / 1 9 9 3

1 2 3 4 5 6 7 8 9 0

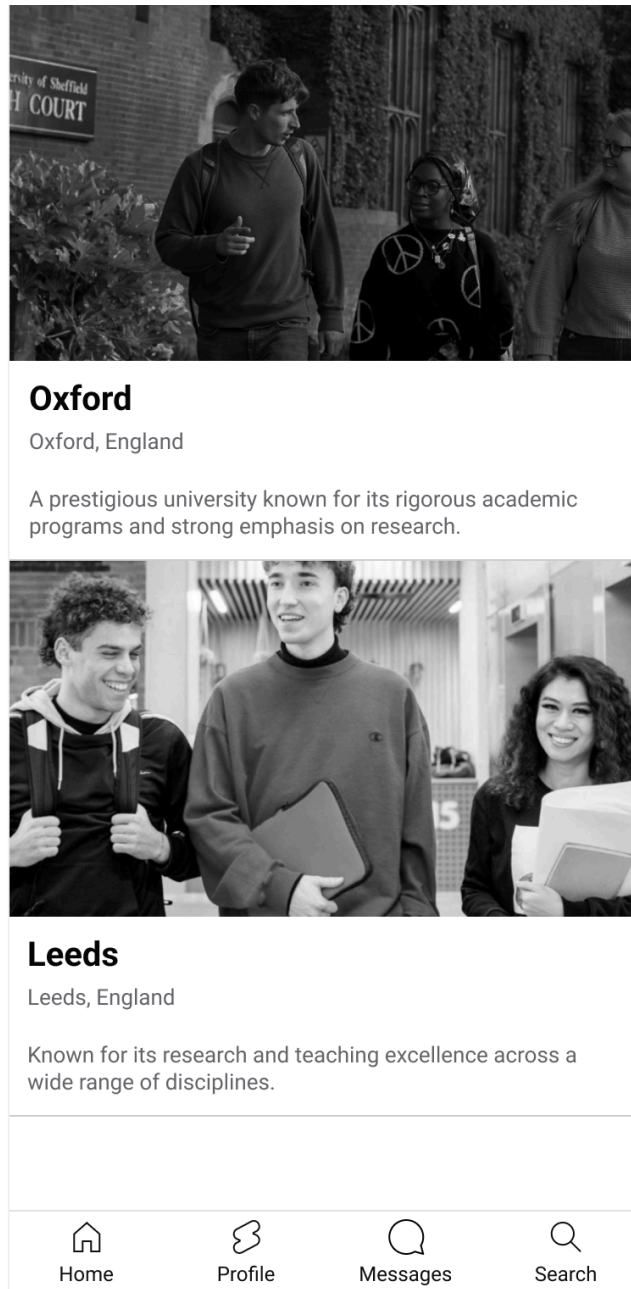

Elements included:

- On the birthday input, create a pattern like DD/MM/YYYY and the user can only input the number to fill the pattern. The input numbers will follow the pattern to fill the birthday input. Like 12/04/1993.
- On the top of the account info page there is a progress bar which shows the percentage of steps passed.
- The back button will guide the user to the previous step of account info and the back button from the first step will direct the user back to Create Account page.
- By pressing the Finish button the user will direct to the home page.
- You should store the user data in a data store so next time it will be available in profile page

Follow below validations per page and in case of error show a toast message with clear text to user about the issue, and do not let user go to next step:

- User Full name:
 - Should not be empty
 - Should not start with number
 - Should not be less than 3 characters
- User birth date:
 - Should be a valid date and before 2010
- Occupations
 - Should not be empty
 - Should not start with number
 - Should not be less than 3 characters
- User Story
 - Should be at least 50 characters

4) Home Page:

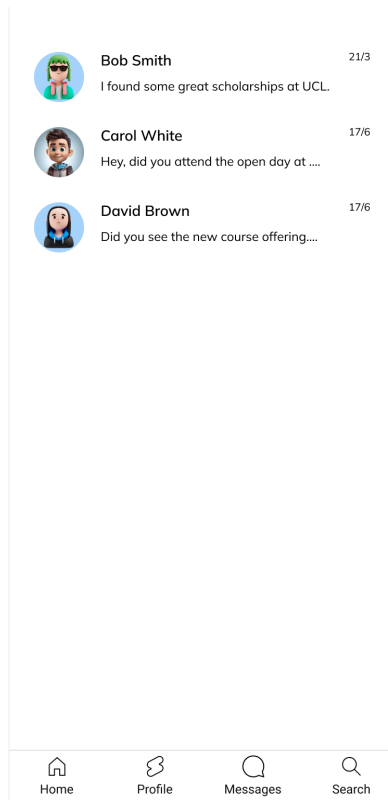

Elements included:

- List of universities including title, location, image and description from parsing the **universities.txt** provided in assets.

- Bottom navigation including **Home, Profile, Messages** and **Search** tabs
- By pressing each item in navigation bottom the related page will open and the bottom navigation should be available in the four main pages mentioned above.
- By tapping on each university item, the University Page will open.
- Images of universities are provided in Universities folder, find the name of the photo from (university_photo) field found in **universities.txt** and then get the correct image from assets to show.

5) Messages Page:

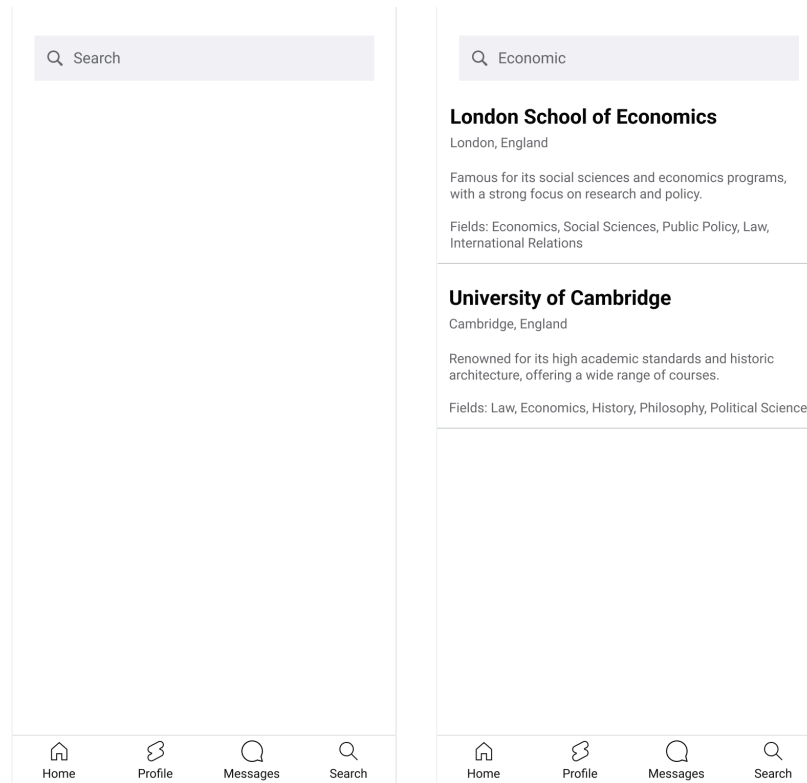

Elements included:

- List of messages from **messages.json**.
- Avatar images are provided in the **Avatars** folder. Find them through their name in messages.json.
- Show the date of the message with the following format (Day/Month) like the design.
- Show user name and also the message body but make sure that you are breaking the message body text if needed to only show one line of that in the list and then put (...) at the end of the message body text if it is broken.

6) Search Page:

Search page is accessible from navigation button tab

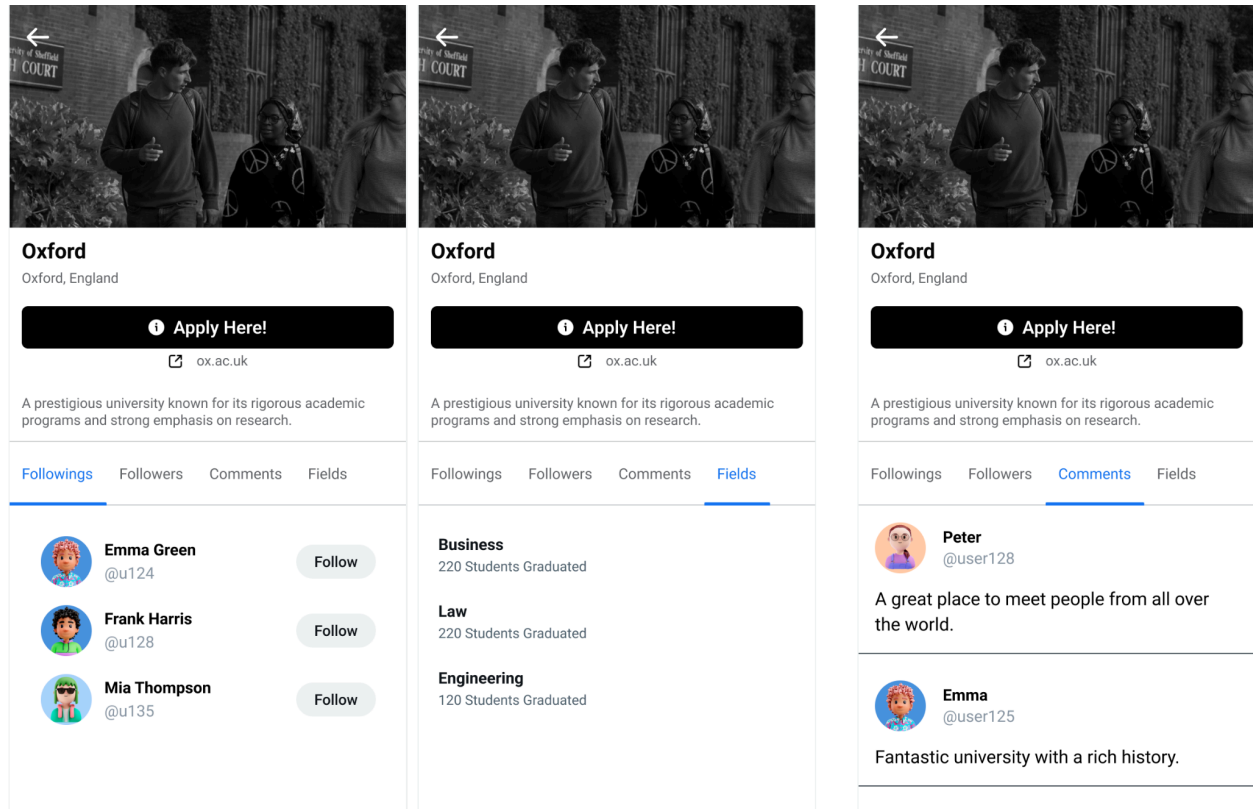

Elements Included:

- You should do the search if the user has input more than 3 characters and has paused typing at least for 3 seconds. So if the user is doing the type action stop searching till the user stops writing and has waited for 3 seconds.
- Do the search based on **universities.txt** and **study_fields.xml** with following rule:
 - First, search in universities.txt to find the text INCLUDING in the university **title** and add them to the result list.
 - Second, search in universities.txt to find the text INCLUDING in the university **description** and add them to the result list.
 - Third, search in study_fields.xml to find if the text INCLUDING in the university **field of studies**. Then find the university id in the universities.txt to get university info and add them to the result list.
 - The order of data is important to follow the above rules. Show university name, description and study fields in the search list.

7) University Page:

When user taps on a university from Home page or from Search page, this page will open showing the related university information

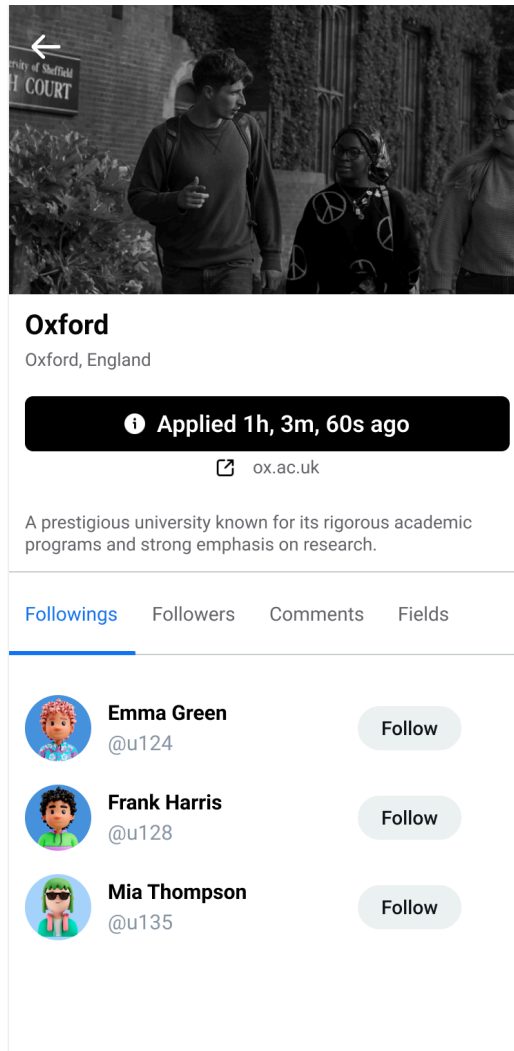

Elements included:

- University photo can be found from universities.txt and inside Universities folder.
- University name and location and description from universities.txt.
- University link (without http and www) that opens the university webpage (as the emulator might not have access to internet, just open the link in browser the result might not be shown)
- Following, Followers, Comments and Fields tabs provided.
- Back button directing to homepage
- Following data will show data from **user_followings.CSV**
 - User avatar photo from Avatars folder
 - User name
 - User ID

- Followers data will show data from **user_followers.CSV**
 - User avatar photo from Avatars folder
 - User name
 - User ID
- Comments data will show data from **comments.json**
 - User avatar photo from Avatars folder
 - User name
 - User ID
 - Comment text
- Fields will show data from **study_fields.xml**
 - Field name for the university (search it using university id in the xml file)
 - Number of graduated students in the specified field

8) Apply action and Profile Page

In the university page if user press **Apply** button, the apply button will get disabled and instead it will show how long ago the student has applied to the university showing exact Hours, Minutes and Seconds ago:

Elements included:

- The applied timer should get updated each 3 seconds.
- You should store the applied universities in a **Room** database containing university id and the applied time.
- If the user presses the phone HOME button (get the application in the background) and opens the app again from the background, the timer should show the real time and be updated instantly.

9) Profile Page
