

Module 1

Every year, various exciting events are held around the world. In order to make it easier for global travelers to access first-hand information about important local events, you need to develop a mobile application that allows users to browse and share wonderful memories from events held in different places.

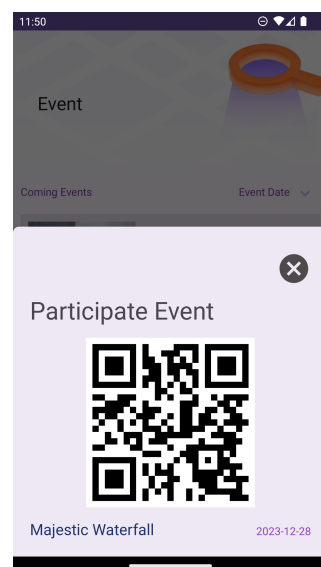

The designer has provided you with the product prototype. As a mobile application developer, your task is to develop the corresponding app based on the requirements of the prototype.

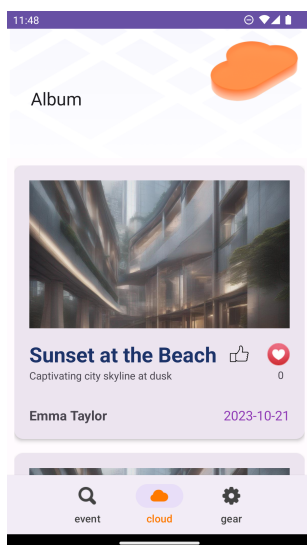

Event Page 1

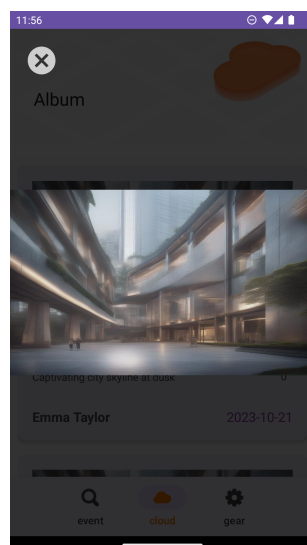

Event Page 2

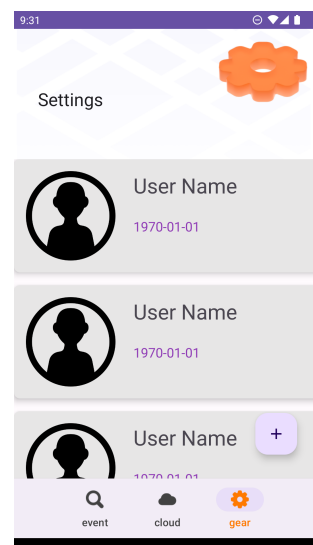

QR Code Page

Album Page

Scale Page

Setting Page

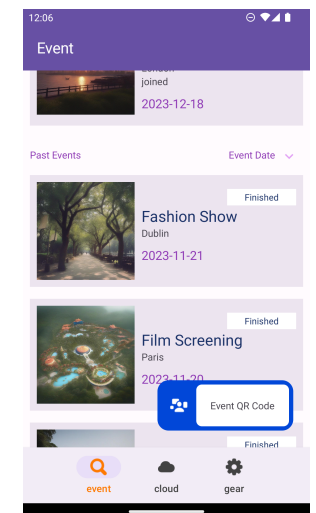

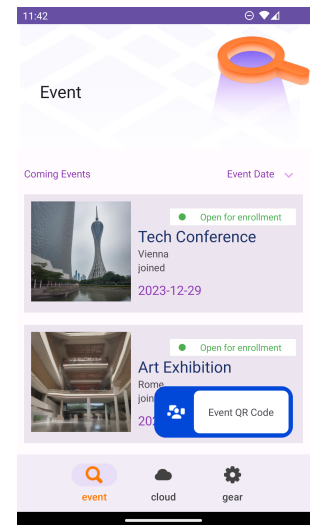

General Requirements:

1. Follow the details specified in the prototype.
2. Tab bar at the bottom, with each tab containing both a text label and icon.
3. The selected tab should have a corresponding highlight color.
4. Pages can be switched between by swiping left or right gestures.
5. Page switch should include the corresponding animation effect ("demo_videos/slide_to_next.mp4").
6. When the user scrolls down, the large header can change to a smaller header using an animation effect ("demo_videos/scroll.mp4"), and vice versa when scrolling up.

1. Event Page

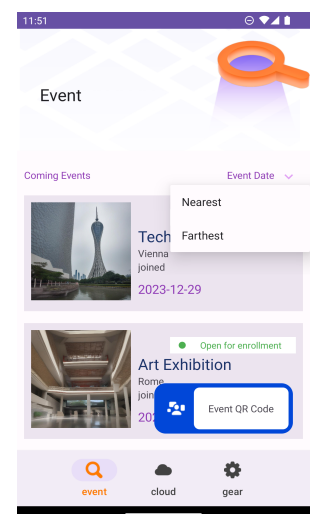

1.1 User Interface Requirements:

1. Display header "Event" and corresponding header image.
2. The event page has two sections: "Coming Events" section and "Past Events" section.
3. "Coming Events" section has title labels "Coming Events" and "Event Date".
4. "Coming Events" section each event card containing:
 - Thumbnail image
 - "Open for enrollment" label
 - Event name
 - Event location
 - "joined" label
 - Date Label
5. "Past Events" section has title labels "Past Events" and "Event Date".
6. "Past Events" section each card containing:
 - Thumbnail image
 - "Finished" Label
 - Event Name
 - Event Location
 - Date Label
7. Clicking "Event Date" label pops up a menu with options "Nearest" and "Farthest" for both sections.
8. "Event QR Code" panel with icon and text floating at bottom right of page.

1.2 Functional Requirements:

1. Read all event data from "data/events.json".
2. When clicking "Nearest" or "Farthest" in the pop up menu, implement sorting of event cards in the corresponding Section by event date from nearest to farthest or farthest to nearest.
3. Clicking "Event QR Code" should display the event QR code page.

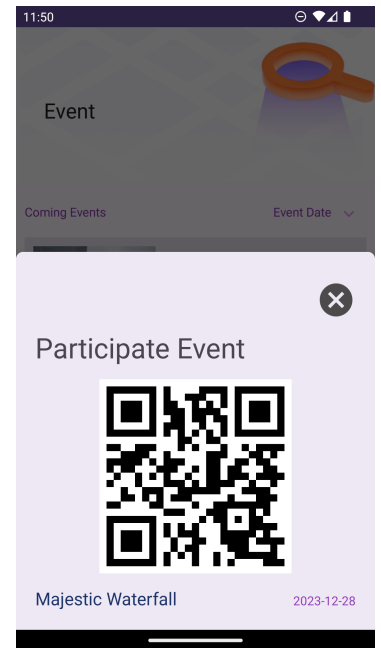

2. QR Code Page

2.1 User Interface Requirements:

1. Display header text "Participate Event" and QR code image.
2. Display event name "Majestic Waterfall" and date "2023-12-28".
3. Close button.

2.2 Functional Requirements:

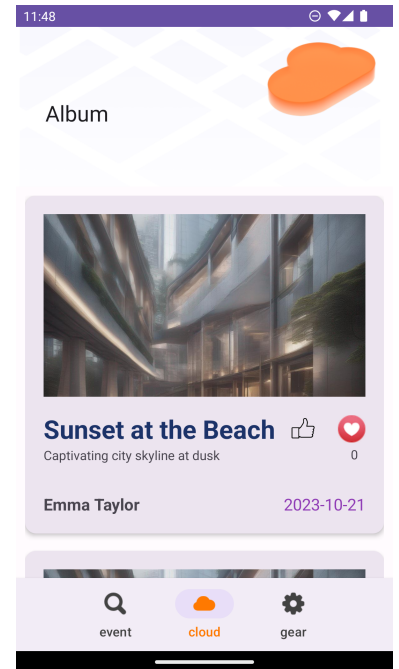

1. Pop up window animation ("demo_videos/qrcode.mp4")
2. Semi-transparent black background.
3. Can return to Event Page by dragging down gesture.
4. Can return to Event Page by tapping close button or black background.

3. Album Page

3.1 User Interface Requirements:

1. Display header text "Album" and corresponding header image.
2. The album block contains the following elements:
 - Card view with shadow and rounded corners
 - Image
 - Photo title text label
 - Photo description text label
 - Sharer name text label
 - Date text label
 - Like/cancel button
 - Heart button
 - Text label for number of heart button clicks

3.2 Functional Requirements:

1. Read all album data from "data/albums.json".
2. Implement like/cancel functionality and animation as demonstrated in "demo_videos/heart".
3. Heart button click animation effect ("demo_videos/like").
4. Display like count based on number of heart button clicks.
5. Persistently save like state and heart button clicked count for each album block.
6. Clicking a photo should lead to the "Scale Page".

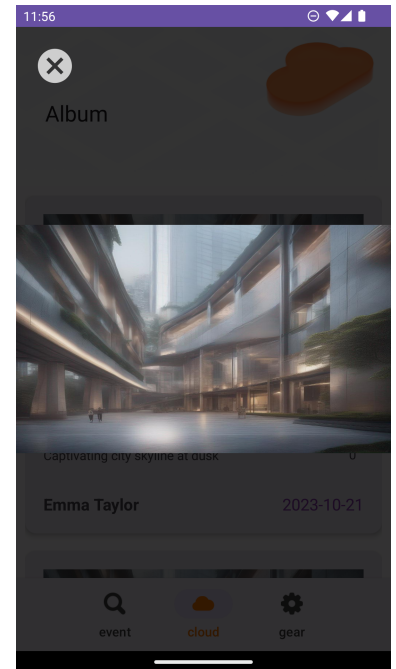

4. Scale Page

4.1 User Interface Requirements:

1. Semi-transparent black background.
2. Photo.
3. Close button.

4.2 Functional Requirements:

1. Click the image in Album Page to display the selected image in this page .
2. Use pinch gestures to zoom in and zoom out of images ("demo_videos/scale.mp4") .
3. Click the close button to return to the Album Page.

5. Settings Page

5.1 User Interface Requirements:

1. Each user block contains a default user name, date and profile picture.
2. By default, there are three existing user blocks on the page.
3. A floating "+" button is located at the bottom right corner.

5.2 Functional Requirements:

1. Clicking the "+" button will add a new user block to the top of the list.
2. Long pressing any user block allows deleting that block
3. Adding new user block to the list with an animation effect ("demo_videos/new_user.mp4").
4. Deleting user block from the list with an animation effect ("demo_videos/delete_user.mp4").
